Since 2011, International Symposium on Mine Safety Science and Engineering has been successfully held four sessions. The objective of ISMSSE 2021 is to create an international forum for discussing the challenges associated with safety in mining industry and to present advances in technology. ISMSSE 2021 thus is a meeting of scientists and professionals who establish ambitious aims to confront ideas and experiences, evaluate implemented solutions, and discuss new ideas that improve safety in mining industry. The organising committee is calling for high quality papers and presentations in the field of mine safety research. Symposium topics include:

- ◆ Prediction and Prevention of Natural Hazards in Mining
- ◆ Occupational Health and Safety in Mining
- ◆ Health and Safety Culture in Mining
- ◆ Mine Safety Regulations and Policies
- ◆ Risk Assessment & Safety Management
- ◆ Epidemiology and Occupational Disease
- ◆ Ground Control & Strata Monitoring
- ◆ Emergency Preparedness And Mine Rescue
- ◆ Impact Of Industry 4.0 On Mine Safety
- ◆ Improving Mining Safety Through Digitalization and Mechanization
- ◆ Mining Productivity and Efficiency
- ◆ From Hazard to Resource: Coalbed/Mine Methane
- ◆ Environmental Sustainability in Mining
- ◆ Other Related Topics in the Field of Mine Safety Research

The symposium is open and accessible in virtual format. Online presentations are accepted!
